

# ZAIDYN App Studio R3 Release Preview

**Beta Release : March 31, 2025**

ZAIDYN App Studio R3 introduces dynamic conditional rendering and enhanced error visibility to significantly improve the user experience and administrative control. This release also empowers users with more efficient data handling and provides administrators with robust configuration capabilities.

## Objective

Introduce **conditional rendering** for the **Table**, **List Card**, and **Accordion widgets** to enable dynamic UI adjustments based on in-row data.

**Display erroneous record** in **Table** and **Fieldset widgets** when ZAS backend validation fails.

Enable **lazy loading of dropdown** values in **Table**, **Search & Filter** and **Fieldset widgets**.

Enable Administrators to **configure Help Guides** for **end users** via resource files and set client specific support email.

## Impact

Administrators can easily optimize the user interface by dynamically **Showing, Hiding, or Disabling UI** controls based on in-row record data while it's loading.

Quickly identify and understand validation errors without any manual searching, which **enhances the user experience**.

Improve performance by **reducing initial load time, enhancing responsiveness**, and providing a smoother user experience.

Allow end users to **easily view or download user guides**, helping them perform actions within the application more effectively. It also provides in-context help tips to **enhance their understanding of features**.
