

# ZAIDYN Field Deployment R-6 Release Preview

Staging: 10-08, 2024 | Production: 11-08, 2024

ZAIDYN Field Deployment R6 enhances operational efficiency and user experience. It addresses complex business requirements and improves system performance. This results in smoother client onboarding, reduced data processing time, and accelerated access to key functionalities.

## Objective

Introduces capability of Product Promotions for customers using **Product Level Alignments**, leveraging rules & intuitive user interface.

Introduces alternate **Alignment Tabular view** for Global clients, reducing dependency on Map view.

Introduces ability to create & share **pre-defined** report templates for better and **consistent data reporting**.

Introduces **self-serve role management** interface for users to easily **create, edit, and view role details**.

## Impact

- Streamline Product Allocations, improved customer experience & increase Product Revenue with **accurate Sales Crediting & Incentives** calculations.
- Alignment Map & **Table view** empower end users, enabling them to quickly assess information and make well-informed decision.
- **Improves ops reporting** productivity by **50%** with up to **70% reduced** number of clicks, while adhering to & reusing pre-defined formats.
- **Brings down the time** required to manage Roles from minutes to **seconds**, boosting operational efficiency for handling ongoing Team & Role changes

# ZAIDYN Field Deployment R-6 Release Preview

Staging: 10-08, 2024 | Production: 11-08, 2024

ZAIDYN Field Deployment R6 enhances operational efficiency and user experience. It addresses complex business requirements and improves system performance. This results in smoother client onboarding, reduced data processing time, and accelerated access to key functionalities.

## Objective

Enables integration of client-specific custom rule scripts in **ZAIDYN Business Rule Engine** as-custom **extensions**.

Extends processing of Alignment Files (Geo & Customer) to consume data in enhanced **delta mode** as per the upstream.

Enhances user experience to **optimize** feature **accessibility, operational efficiency**, and improve the overall **system performance**.

## Impact

→ ZAIDYN's **Rule engine** offers greater **flexibility** in **managing** complex **business rules** and generates **alignments** that comply with custom rules.

→ **Improves alignment** records ingestion **time** by **up to 50%**, eliminates additional pre-processing step from ingestion pipeline.

→ Optimized **user experience** with **faster access** to key functionalities such as Team based **business rules view**, reuse **team cycles, employee address** in **reports**, and **improved map settings panel**.
